HERDA TEST RESULT

AURÉLIE DEKOSTER LE MAS 36340 CLUIS FRANCE		Case: HRD1575 Date Received: 18-Nov-2008 Report Date: 21-Nov-2008 Report ID: 6881-8646-1485-7062
Name: GOOD ADVICE YOB: 03 Breed: AP Sex: S	Reg: 624520 Alt. ID:	
Sire: GOOD COMMODITY Dam: MOONS REVIEW	Reg: Reg:	

HERDA Test Result

N/N

Result Codes:

N/N	Normal - horse does not have the HERDA gene
N/HRD	Carrier - horse carries one copy of the HERDA gene
HRD/HRD	Affected - horse has two copies of the HERDA gene

Hereditary equine regional dermal asthenia (**HERDA**) is a degenerative skin disease characterized by hyperextensible skin, scarring, and severe lesions along the back of affected horses. Affected foals rarely show symptoms at birth. The condition typically occurs by the age of two, most notably when the horse is first being broke to saddle. HERDA is an autosomal recessive trait which means that breedings between carrier (N/HRD) horses have a 25% chance of producing an affected foal (HRD/HRD). Breedings between carrier and normal (N/N) horses produce normal foals, but 50% of these are expected to be carriers.

This test is specific for the mutation in the *cyclophilin B* gene (PPIB) that has been shown to be associated with HERDA. For more information go to <http://vgl.ucdavis.edu>.
